## Top-Level Climate Modeler Spills the Beans on the 'Nonsense' of 'Global Warming Crisis'

by Tony Thomas in Quadrant

<https://tinyurl.com/yxprp4b9>

<https://quadrant.org.au/opinion/doomed-planet/2019/09/a-climate-modeller-spills-the-beans/>

There's a top-level oceanographer and meteorologist who is prepared to cry "Nonsense!" on the "global warming crisis" evident to climate modellers but not in the real world. He's as well or better qualified than the modellers he criticises — the ones whose Year 2100 forebodings of 4degC warming have set the world to spending \$US1.5 trillion a year to combat CO2 emissions.

The iconoclast is [Dr. Mototaka Nakamura](#). In June he put out a small book [in Japanese](#) on "the sorry state of climate science". It's titled *Confessions of a climate scientist: the global warming hypothesis is an unproven hypothesis*, and he is very much qualified to take a stand. From 1990 to 2014 he worked on cloud dynamics and forces mixing atmospheric and ocean flows on medium to planetary scales. His bases were MIT (for a Doctor of Science in meteorology), Georgia Institute of Technology, Goddard

Space Flight Centre, Jet Propulsion Laboratory, Duke and Hawaii Universities and the Japan Agency for Marine-Earth Science and Technology. He's published about 20 climate papers on fluid dynamics.[\[i\]](#)

Today's vast panoply of “global warming science” is like an upside down pyramid built on the work of a few score of serious climate modellers. They claim to have demonstrated human-derived CO2 emissions as the cause of recent global warming and project that warming forward. Every orthodox climate researcher takes such output from the modellers' black boxes as a given.

A fine example is from the Australian Academy of Science's explanatory booklet of 2015. It claims, absurdly, that the models' outputs are “[compelling evidence](#)” for human-caused warming.[\[ii\]](#) Specifically, it refers to model runs with and without human emissions and finds the “with” variety better matches the 150-year temperature record (which itself is a highly dubious construct). Thus satisfied, the Academy then propagates to the public and politicians the models' forecasts for disastrous warming this century.

Now for Dr Nakamura's expert demolition of the modelling. There was no English edition of his book in June and only a few bits were

translated and circulated. But Dr Nakamura last week offered via [a free Kindle version](#) (<https://tinyurl.com/yxmaypoj>) his own version in English. It's not a translation but a fresh essay leading back to his original conclusions.

The temperature forecasting models trying to deal with the intractable complexities of the climate are no better than “toys” or “Mickey Mouse mockeries” of the real world, he says. This is not actually a radical idea. The IPCC in its third report (2001) conceded (emphasis added),

*In climate research and modelling, we should recognize that we are dealing with a coupled non-linear chaotic system, and therefore that the long-term prediction of future climate states is not possible. (Chapter 14, Section 14.2.2.2. )]*

Somehow that official warning was deep-sixed by the alarmists. Now Nakamura has found it again, further accusing the orthodox scientists of “data falsification” by adjusting previous temperature data to increase apparent warming “The global surface mean temperature-change data no longer have any scientific value and are nothing except a propaganda tool to the public,” he writes.

The climate models are useful tools for academic studies, he says. However, “the models just become

useless pieces of junk or worse (worse in a sense that they can produce gravely misleading output) when they are used for climate forecasting.” The reason:

*These models completely lack some critically important climate processes and feedbacks, and represent some other critically important climate processes and feedbacks in grossly distorted manners to the extent that makes these models totally useless for any meaningful climate prediction.*

He projects warming from CO2 doubling, “according to the true experts”, to be only 0.5degC. He says he doesn't dispute the possibility of either catastrophic warming or severe glaciation since the climate system's myriad non-linear processes swamp “the toys” used for climate predictions. Climate forecasting is simply impossible, if only because future changes in solar energy output are unknowable. As to the impacts of human-caused CO2, they can't be judged “with the knowledge and technology we currently possess.”

Other gross model simplifications include:

- # Ignorance about large and small-scale ocean dynamics
- # A complete lack of meaningful representations of aerosol changes that generate clouds.
- # Lack of understanding of drivers of ice-albedo (reflectivity) feedbacks:

“Without a reasonably accurate representation, it is impossible to make any meaningful predictions of climate variations and changes in the middle and high latitudes and thus the entire planet.”

# Inability to deal with water vapor elements

# Arbitrary “tunings” (fudges) of key parameters that are not understood.

excerpts from Anthony Watts

## **The IPCC's Core Problem**

The IPCC – Al Gore based Anthropogenic Global Warming scare has driven global Governments' Climate and Energy Policies since the turn of the century. Hundreds of billions of dollars have been wasted on uneconomic renewable energy and CO2 emission control schemes based on the notions that it is both necessary and possible to control global temperatures by reducing CO2 emissions.

From its inception the IPCCs remit was to measure Anthropogenic Climate Change and indeed Climate Change was defined as Anthropogenic until the 2011 SREX report when the definition was changed. The climate science community simply designed

their models to satisfy the political requirements of their funding agencies. – Publications, academic positions, peer approval, institutional advancement and grants were unlikely to be forthcoming unless appropriate forecasts of catastrophic warming were dutifully produced. The climate models have egregious structural errors and, what is worse, in their estimates of uncertainty the IPCC reports for Policymakers simply ignored this structural uncertainty and gave policy makers and the general public a totally false impression of the likely accuracy of their temperature forecasts. It is this aspect of the AGW meme which is especially unconscionable.

## The Real Climate Drivers.

Earth's climate is the result of resonances between various quasicyclic processes of varying wavelengths. The long wave Milankovich eccentricity, obliquity and precessional cycles are modulated by solar "activity" cycles with millennial, centennial and decadal time scales. These in turn interact with lunar cycles and endogenous earth changes in Geomagnetic Field strength, volcanic activity and at really long time scales plate tectonic movements of the land masses. The combination of all these drivers is mediated through the great oceanic current and atmospheric pressure systems to produce the earth's climate and weather.

## How to Create A Social State

*allegedly by Saul Alinsky who wrote "Rules for Radicals"*

**There are 8 levels of control that must be obtained before you are able to create a social state. The first is the most important.**

- 1) **Healthcare** – Control healthcare and you control the people
- 2) **Poverty** – Increase the Poverty level as high as possible, poor people are easier to control and will not fight back if you are providing everything for them to live.
- 3) **Debt** – Increase the debt to an unsustainable level. That way you are able to increase taxes, and this will produce more poverty.
- 4) **Gun Control** – Remove the ability to defend themselves from the government. That way you are able to create a police state.
- 5) **Welfare** – Take control of every aspect of their lives (Food, Housing, and Income)
- 6) **Education** – Take control of what people read and listen to--take control of what children learn in school.
- 7) **Religion** – Remove the belief in the God from the Government and schools.
- 8) **Class Warfare** – Divide the people into the wealthy and the poor. This will cause more discontent and it will be easier to take (Tax) the wealthy with the support of the poor.
